RETROFIT

Try on Y2K fashion with AR and AI, then find it second-hand

Live AR try-on
Glasses and hats on your face, in real time

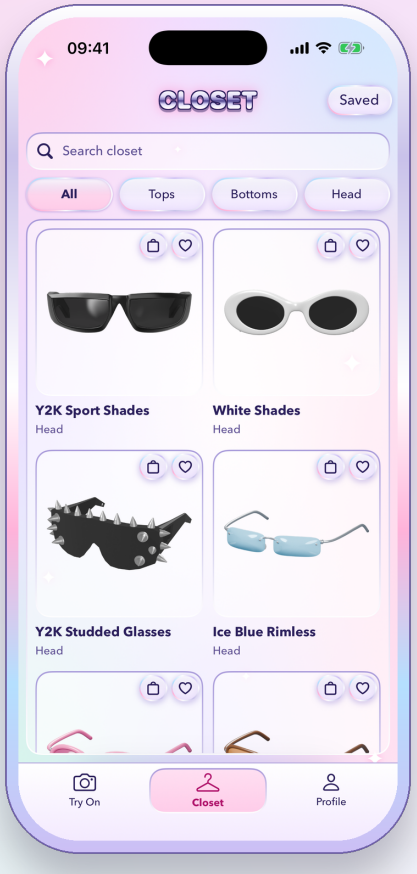

AI try-on
Take a photo and see yourself wearing any piece

Find it second-hand
Search Depop, Vinted or eBay in one tap

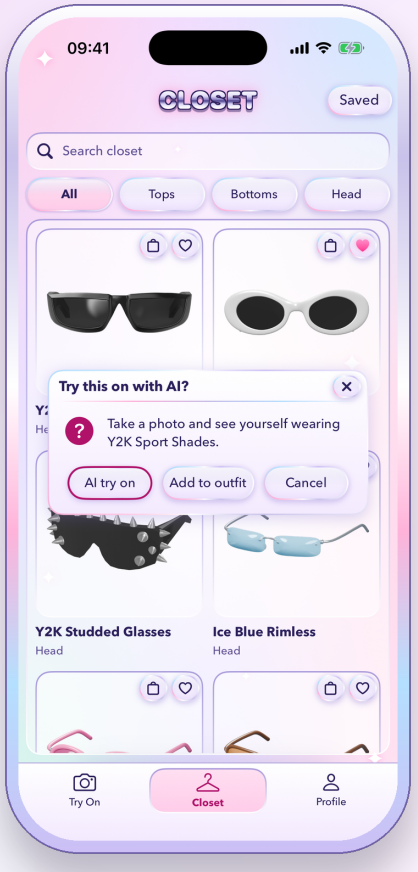

HackNotts '26 · Theo Rook & Rafferty Carter-Lazenbury

Inside the app

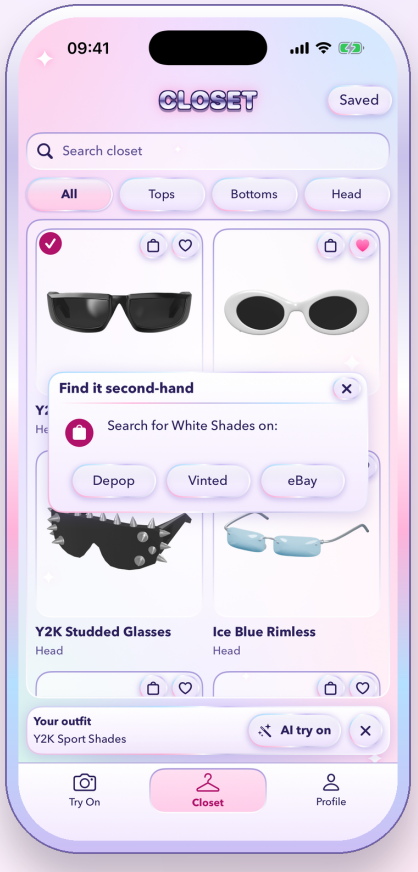

Browse the closet

26 Y2K pieces, with search and filters

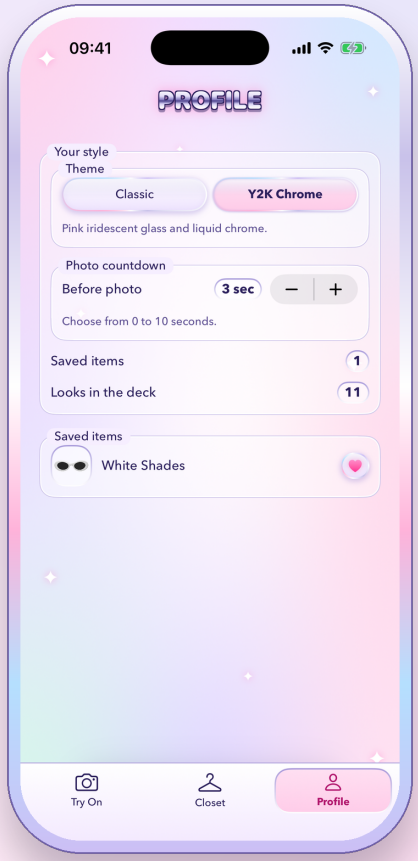

Try it on with AI

Take a photo, or build an outfit first

Find it second-hand

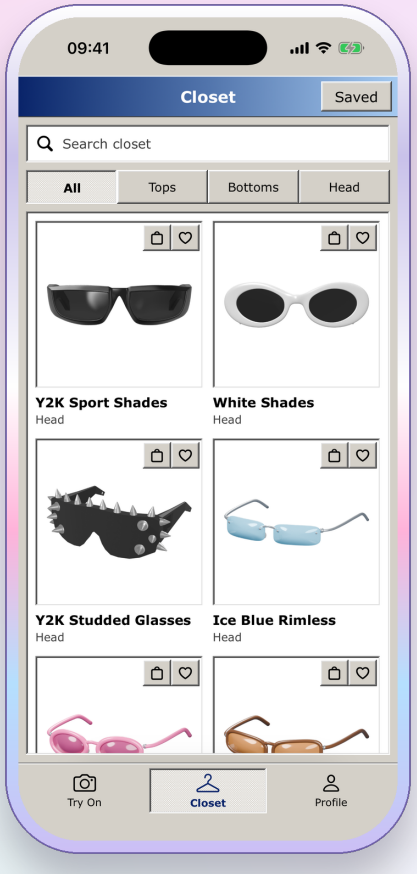

Depop, Vinted or eBay in one tap

Pick your theme

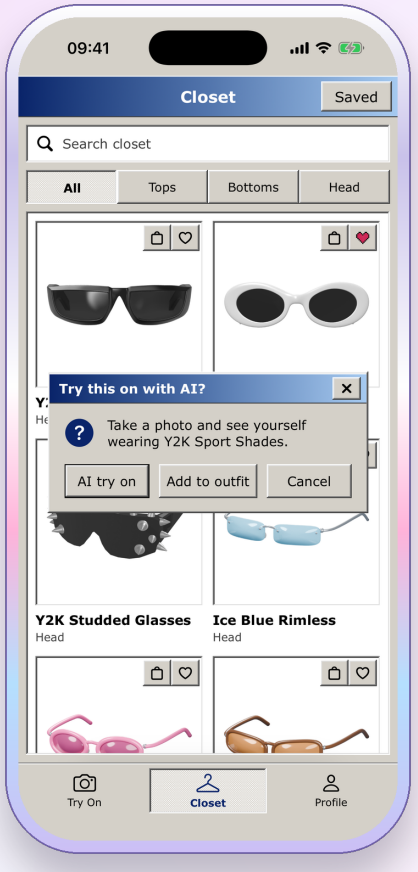

Classic Windows or Y2K Chrome, live

Prefer it Classic?

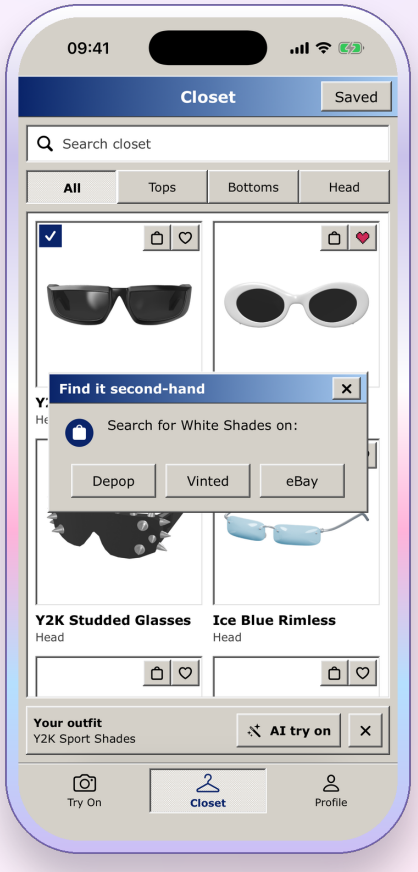

Classic closet

Grey bevelled buttons and windows

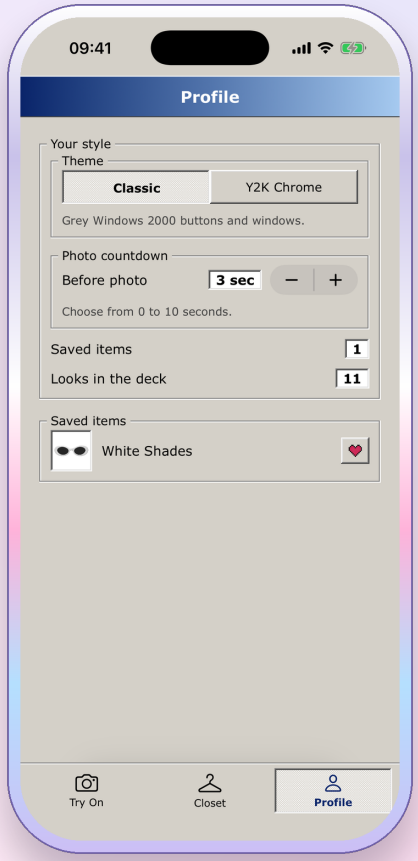

Windows dialogs

The same AI try-on, Windows 2000 style

Same shops

Depop, Vinted or eBay, still one tap

One switch

Flip between the two themes any time

How we built it

iPhone app
SwiftUI, ARKit and RealityKit

Vercel function
TypeScript. Keeps the AI key off the phone

fal.ai try-on
Renders you wearing the piece

Photos go up, the rendered picture comes back, with live queue progress on the way

Live AR try-on
ARKit tracks your face. USDZ glasses, and hats we modelled in Blender, are fitted to your eyes and head every frame.

Our own design system
A Windows 2000 component kit that also draws Y2K Chrome. Swift Observation restyles every screen the moment you switch.

Second-hand search
Every garment has its own search phrase. One tap opens it on Depop, Vinted or eBay, in the shop's app if you have it.

LIVE DEMO

LET'S TRY IT ON

Thank you!
